

### **LUBRICATION WHERE IT ACTUALLY MATTERS**

Superabrasive's patent-pending spider design routes grease directly to the shaft-to-spider interface - the area that usually gets ignored. Our system uses the same grease points you already service.

- No extra fittings
- No extra steps
- No teardown required

**Just grease your trowel arms like you always do, and the spider gets protected too.**

### **BUILT FOR THE REAL WORLD**

By keeping the shaft-spider interface lubricated during routine maintenance, our design helps:

- Reduce corrosion and fretting
- Prevent spiders from seizing onto the shaft
- Make spider removal easier
- Extend shaft and spider life
- Cut downtime and repair costs.

### **LESS HAMMERING. LESS HEAT. LESS HEADACHE.**

Anyone who's fought a seized spider knows the cost - in labor, lost time, and damaged parts. Superabrasive's system is designed to help prevent that fight before it starts.
